

VOLUNTEERS NEEDED FOR STUDY

Wearable bioelectronic device to detect changes in health status
IRB2021-1373

We are inviting people that may or may not have been diagnosed with chronic obstructive pulmonary disease (COPD) to participate in a research study to test the accuracy of a device.

You may be eligible to participate if you are:

- Between the ages of 18-35 or 45-75 years old
- You are not pregnant
- You do not have a disease that would affect your breathing, heart rate, or walking

You will be asked to do:

- Walk on a treadmill for 10 minutes, two different times, with rest in between
- While walking you will wear an EKG, a newly invented device (like a band-aid), and markers that will capture your walking
- The visit will take about 1 ½ hours
- You will then wear the device home and mail it back after 24 hours
